

RFW Wax Removing Surfactant

CLEAN SWEEP INDUSTRIAL SOLUTIONS

Clean Sweep helps heavy industries replace the toxic chemicals used in their operations with cleaner, safer, biodegradable solutions.

RFW is a biodegradable, optimized surfactant formulation that quickly and effectively removes wax buildup. **RFW** contains no hydrochloric, glycolic, phosphoric or sulphuric acids, and contains no BTEX chemicals. **RFW** outperforms toxic and hazardous acid and BTEX based solutions, leaving surfaces clean and undamaged, with no harsh chemicals to dispose of.

FEATURES

- 100% biodegradable.
- Non-irritating.
- Emulsifying technology.

BENEFITS

- Powerful, clean, cost-effective, and safe replacement for traditional de-waxing products.
- Eliminates the need for harsh chemicals.
- Optimize flow and prevent further build-up.
- Minimize downtime, and maintenance costs.

APPLICATIONS

- Fast acting downhole wellbore wax removal.
- Gas lift systems.
- Pump jack systems.
- Pipelines.
- Any operation prone to wax, paraffin, or asphaltene build up.
- Available in 208 litre drums, and 1,000 litre totes.

ENHANCED OIL RECOVERY

RFW helps optimize production by treating wellbore blockages, and removing wax and other typical downhole substances that dramatically inhibit production and result in costly delays and interventions. Batch treatments and extended soaks using **RFW** are effective primary stimulation techniques to ensure wells begin producing faster and more efficiently.
